Sprint Reflection Questions

1. What was specifically accomplished during the past sprint?
- During the past two weeks our team has been working exclusively on improving the user experience and the requirements change.
- Specifically:
    - Thomas has been working on adding OpenAI reporting with a vector database for data analysis.
    - Andrew has completed work on documenting the changes required for the requirements change.
        - He also helped to complete the code required for the requirements change.
    - Zach has been working on requirements change code.
    - Charles has been helping with requirements change code.

2. What challenges did you encounter?
- We did not encounter any challenges in specific, but we are recognizing that our front end requires more work and will begin to improve on the user interface.

3. Do you anticipate any specific challenges in the next sprint?
- The next sprint is the beta testing for other users in the system; we will need more system and module testing; we also need to ensure that our front end is more user friendly and appealing. This will likely take more time and resources.

4. Is there anything you need from the staff right now?
- At this stage, we are managing well with the resources and guidance provided. However, we may seek advice on balancing the project's scope with our time constraints as we further define our requirements.
